*Since 1982*

# history

Avşar Emaye is the leading name of enameled cookware production sector in Turkey and one of the largest enameled cookware manufacturer in the Europe since 1982 and is situated on 60.000 m2 of land located at the "Bolvadin" district in Afyonkarahisar City.

Avşar Emaye has always pursued the latest and leading trends in cookware manufacturing industry since its establishment in 1982. A brief look at our history shows that we have always strived to be a pioneer in cookware industry not only in our region but also in the world. Avşar Emaye is specialized at the R&D, manufacturing and selling of low, mid and high grade enamel coated Steel and Aluminum cookwares, including all kinds of forged, pressed, ceramic, non-stick and enamel cookwares.

The ranges of products are not only casseroles, saucepans, bowls, tea-pots, deep fryers but also oven trays and coffepots which are formed in special ways. All these products are produced in different forms, colours and thickness for local market in Turkey and for 35 different countries by considering their cultures and economical conditions. We are already well known manufacturer and brand in the world. We always follow and use all the latest technology in our production line to offer the best, the most ergonomic and healthy products to our buyers and end users.

Our goal is to expand our market shares all around the world. We have very flexible production line and we produce the goods according to customer instructions. You give us technical details about products you need and we can shape your ideas.

Avşar Emaye is a dynamic and active company who always prefers novelty and always has good relationship with its customers and technical groups all over the world for both marketing and technological relations by willing to contact you in producing and selling products and to create big projects with a good partnership.

# *What is enamel?*

Enamel or enameling is a coating technique in which glass is refined in powder form and then heated to considerably high temperatures around 750-850°C causing the material to melt and become somewhat fluid.

After cooling down, the material attaches to the surface it has been applied, hardens and becomes a smooth, durable, even scratch-resistant coating.

Some crude forms of enameling processes have been known to man since as early as the ancient Egyptian era. Mostly used for decorative, protective or preservation purposes, enameling has been applied to a wide variety of materials including metals, stone, other glass objects, and even ceramics.

Historical evidence suggests that many other ancient cultures other than ancient Egyptians, such as Ancient Greeks, Celts, Georgians, Chinese and middle age Europeans used the enameling process on a wide variety of materials and object.
